Important Pre-Notification About Integration:

API Information:
Main User (Ana Kullanıcı) and Technical User (Teknik Sorumlu) are authorized to access "Merchant no (merchant_id)", "Merchant password (merchant_key)" and "Merchant secret key (merchant_salt)" which are required for API. These credentials can be found on the INFORMATION (BİLGİ) page on the Merchant Panel (Mağaza Paneli).

Integration consists of 2 steps:
STEP 1 - Display the payment form in an iFrame: A server-side request to the API is necessary to obtain iframe_token. Payment notification form can then be opened inside an iFrame HTML TAG using this token.
STEP 2 - Create the Callback URL to Receive Payment Results: Callback URL is the URL of a page on your website where the PayTR system will POST payment results.

Please use Support (DESTEK) page on the Merchant Panel (Mağaza Paneli) for your inquiries regarding the integration process.
